Dual Straps System

Brought back the classic dual straps system; comparing to the single straps/no straps, the system providing different levels of tightness and security to fit the different needs of weightlifting athletes, as well as different shapes of their foot, ensuring constant contact with the ground, the shoes, and the feet.

Breathable and Durable

While the third generation sacrificed durability with lightheartedness and breathability, the Romaleos 4 finds the happy marriage between both sides. First keeping the classic Flyknit material but blending it with thick cotton mesh for the ankle for durability. For flexibility, the fabric used at the toe area is much stronger than the previous generation, without using leather.

True to Feet Toe Box

The toe box is narrower and should naturally fit the athletes toes shape. A narrower space will help consolidating the contact and force to the ground, minimizing heel and toe shift during the lift.

Classic Heel Height

Keeping the heel height at 20mm (.75”), perfected from the evolution of the sport of weightlifting itself, reserving the preciseness and effectiveness.

TPU Shoe Sole

Reinforced rigidity in midsole, creating strong base for heavy lifts. Updated outsole shape for steady contact when landing a lift.
